

We produce **packaging**

PTS Group company -
Ukrainian manufacturer of packaging

PTS Group – Ukrainian manufacturer of packaging. Working with our company, you get the best technological solutions by the first, technical support, best management, security, confidentiality.

Every year the company develops and expands its capabilities.

PTS GROUP was founded in 2016. Every year the company developed in the field of packaging, analyzed the market, identified the needs of consumers. Within 5 years, we have opened several directions in the packaging.

Step of development PTS Group

Establishment of the company
The production of plastic tubous for the premium segment has started

May 2021

Production of gasset bag
Installation and launch of a new line for the production of gusset bags

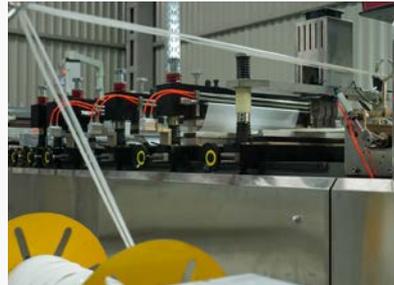

January 2022

Coffee valves

Launch of the line, which produces doypacks and gusset bags with a valve for coffee

July 2022

- **January 2016**
- **Launch of doypack production**
- Installation, launch and adjustment of production line equipment
- **August 2021**
- **Launch of an online store**
- Online store of packaging was opened packstor.com.ua
- **May 2022**
- **Barrier film for trays**
- The sale of barrier film for sealing trays has started

We produce packaging

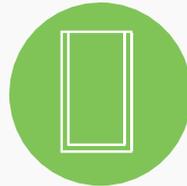

Doy pack

Doy pack is a stable bag with a flexible bottom, which enables the pouch to stand up even with a light product.

Gusset bag

Gusset bag is a side gusset pouch with a center seal "at the back" with a square bottom formed in the packaging of the products.

3-side seal pouch

This convenient packaging format comes with 3 sides sealed and one open end for filling, are usually square or rectangular in shape.

Retort pouch

Retort packaging (retort pouch) is used for products requiring sterilization.

Flat bottom pack

Flat bottom pack is a new kind of package in the world. It has high barrier to preserve taste, aroma, color and smell. Stable flat bottom is provided by even a light product.

Vacuum bags

Vacuum-Seal Bags are ideal for use with Vacuum Sealing Systems to package food. Preserve, protect and prevent freezer burn with bags designed with channels that allow complete air removal.

Stabilo bag

Stabilo bag has a sturdy seam underneath and 4 rigid ribs on the sides.

Flexible packaging

High-quality printing of up to 10 color sections + reverse printing with a sample varnish will allow you to realize any design solution and provide the package individuality.

Barrier film

Barrier film is the best solution for packaging food, health care products, perfume and cosmetic. It has a very high water vapor and oxygen tightness. It is therefore used for packaging of goods that must be stored dry or airtight.

Features of the doy pack

Doy pack - is a stable bag with a flexible bottom which enables the pouch to stand up even with a light product.

Being filled with content, the fold opens and the bag forms an even wide base, that allows doypack to stand.

It is a package for packing small and bulk goods from combined barrier materials. A round (oval) bottom provides stability in an upright position.

The bag was named after its French inventor Louis Doyen. In 1963 his company developed DOYen PACKaging (or Doypack).

It is used for:

Dry products: Coffee, tea, seasonings, dried fruits, sweets, sports food, granola, musles, snow products, seeds, pop-corn, animal feed.

For thick and pasty products: mayonnaise, tomato paste, condensed milk, jam, ketchup, shampoo, gel for soul.

For piece products: nuts, breadcrumbs, dried fruits, biscuits, frozen fruits and berries, preservation (cucumbers, tomatoes, cabbage), pet food, etc.

Features of the gusset bag

Gusset bag – is a side gusset pouch with a center seal “at the back” with a square bottom formed in the packaging of the products.

Side gusset bags are named for the gusset or fold on either side of the bag. The gussets expand when the package is filled with product, while the weight of the contents holds the bag upright.

Our high-quality gusseted bags with valve are food compliant and are ideal for packaging roasted coffee and other outgassing products. The material is neutral in odour and offers the best possible barrier properties thanks to a special material structure.

It is used for:

Many kinds of bulk food products as coffee, groceries, musles, cereals, spices, tea.

Features of the three-side seal pouch

This convenient packaging format consist of 3 sides sealed and one open end for filling. It's usually square or rectangular in shape.

Available with a range of customisable features such as resealable zippers, easy open tear notches and hanging holes. The versatility of this format expands to mimic the functionality of a multi-use pouch. The 3-side seal pouch is an adaptable packaging format that is suitable for both vacuum sealing and freezing. Flat 3-side seal pouches are appropriate for various applications in both food and non-food industries. We can also make your packaging clear so the product can be viewed through the sealed pouch.

3 side seal sachets are also very easy to print on, so they can be customized with your brand or logo.

As a result, 3-side seal pouches come in an affordable way with high-speed runs to fit your product, and they work well with form fill seal (FFS) machines.

It is used for:

different bulk products (spices, sweets, candies, teas and many other goods), different chemical bulk substances (powder, cream, etc.), textile products (socks, underwear, tights, etc.).

Pouch has additional features: zip lock, euroslot, easy opening nouch.

Features of the vacuum bag

The vacuum bag is the bag in which the air has been removed.

Vacuum Bags are ideal for use with Vacuum Sealing Systems to package food. Multilayer construction blocks moisture and oxygen and makes the bags strong enough to simmer and microwave.

Vacuum bags considerably prolong terms of products storage, keep in an ideal condition not only appetizing characteristics, but also its freshness, nutritious and food properties and aroma.

Using vacuum packaging ensures: mechanical strength; protection of the product from external influence; for a long time preserves its taste, color, freshness and product appearance; packing tightness;

Applicable composites:

PA/PE, PET/PE, PA/EVOH/PE

It is used for:

Meat, fish, sausage products, cheeses, dairy products, seafood, vegetables and fruits, salads and semi-finished products, confectionery, technical goods.

Features of the stabilo bag

Stabilo bag has a sturdy seam underneath and 4 rigid ribs on the sides.

The square bottom appears after filling.

The package is stable, even with a small mass of the product inside. Thanks to the soldered side edges the package retains its shape well, which allows using all 4 faces for marketing and consumer information purposes. Thanks to the hidden seam in the side, the back side is open for use for marketing purposes as well as the front one.

It is used for:

Coffee, baking, sweets, snacks, animal feed, dairy products.

Features of the retort pouch

Retort packaging (Retort- pouch) is a soft food packaging, which is an excellent alternative to the usual cans during the production of canned food. Retort packaging (Retort pouch) consist of several laminated layers suitable for high temperatures during sterilization in autoclaves. The most common type of retort package is consisted of the following laminated layers used for different purposes:

Polyethylene terephthalate (glossy or matte) is a film resistant to external impact; nylon - protects packaging from micro-punctures, arising from multiple wrinkles or folds; aluminum foil is used as a barrier layer which does not transmit light and gases; cast polypropylene film is a strong and heat-sealable layer which protects against the migration of polymers into the product.

Retort packaging usage provides high safety.

It is used for:

products requiring sterilization, such as: porridge, stew, canned goods, soups, sauces, baby food (vegetable and fruit mash, soups, pasta, as well as cereals, meat, pate), animal feed. Quick preparation is the main advantage of such dishes.

Features of the barrier film for tray sealing

Barrier film is a special product for trays, which provides isolation of products from the external environment. The best solution for packaging food, medical products, and cosmetic products.

Low-barrier films are mainly used for packing seafood and meat products in frozen condition.

Medium barrier films for vacuum packing are produced and used for food packaging. This particular type of film suitable for flexible packaging is produced on thermoforming machines. It features a wide range of applications and protects the packaged goods just as reliably in the deep-freeze sector as in pasteurization.

High barrier films consist of several layers of polymers. The presence of some layers ensures the improvement of barrier features of the film. This particular type of film suitable for flexible packaging is produced on thermoforming machines. It features a wide range of applications and protects the packaged goods just as reliably in the deep-freeze sector as in pasteurization.

Features of the flat bottom pack

Flat bottom pack – new kind of package in the world . It has high barrier to preserve taste, aroma, color and smell along with stable form.

Used for packaging of dry products such as spices, herbs and tea, coffee, dried breakfasts, granola, muesli, baking, groceries, feed for pets, chocolate, powder.

Technical features:

- Degassing valve;
- Variety of sizes (any non-standart size by the customer's request);
- Different materials (craft-paper, white poster paper, PET, foil, BOPP);
- With zip lock or without it;
- Easy opening notch;
- Matte varnish or soft touch varnish.

Advantages:

- High barrier to preserve taste, aroma, color and smell
- Stable flat bottom even provided a light product
- Attractiveness on the shelves
- Each side and even the bottom of the bag are suitable for printing information about the brand and the product.
- An opportunity to pack more product appeal on the shelves.

Production of flexible packing

High-quality printing of up to 10 color sections + reverse printing with a sample varnish will allow you to realize any design solution and provide the package individuality.

The presence of 10 sections of the printing machine allows using 10 colors at design creation (CMYK+White+5 PANTONE).
